KIMS: seed 1234, N = 2048. KIMS 10 seeds: mean over seeds 1-10, the value of Table I on MILUV, NTU VIRAL and IULUI.
LM: the same window objective solved by Levenberg-Marquardt. SW-PGO: sliding-window pose graph with the Tukey loss. SFUISE: published configuration from the KIMS start pose.
filter: our runs of the code released with MILUV (EKF + laser height) and UTIL (ESKF).
Whole flight, no alignment. NTU VIRAL: Leica prism, yaw + translation fit per run, 10 s cut at both ends. div.: RMSE above 100 m. -: no output.
